EXAMINER

HARPER, V PAUL

ART UNIT PAPER NUMBER

2626

DATE MAILED: 08/15/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/029,539	Applicant(s) SHAFFER ET AL.	
	Examiner V. Paul Harper	Art Unit 2626	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 23-43 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 23-43 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 23-25, 27, 28, 33-36, and 38 are rejected under 35 U.S.C. 102(b) as being anticipated by Cohen (US Patent 5,524,169), hereinafter referred to as Cohen.

Regarding **claim 23**, Cohen teaches a method for location-specific mobile speech recognition (abstract). Cohen's teachings include the following:

- determining a coordinate location of a mobile device communicating over the communication network (col. 4, lines 5-26; determine the geographic location);
- building a dynamic grammar responsive to the determined coordinate location of the mobile device (col. 4, lines 24-56; utilize location specific grammars);
- capturing a vocal expression of a speaker utilizing the mobile device (col. 4, lines 45-56; utterance is captured and recognized); and
- determining information related to the vocal expression based on comparing the grammar with the captured vocal expression (col. 4, lines 45-56; col. 5, lines 1-6).

Regarding **claim 24**, Cohen teaches everything claimed, as applied above (see claim 23). In addition, Cohen teaches “wherein determining a coordinate location of a mobile device communicating over the communication network comprises receiving the location of the mobile device from the communication network” (col. 4, lines 4-26; signals from the cellular transmission network).

Regarding **claim 25**, Cohen teaches everything claimed, as applied above (see claim 23). In addition, Cohen teaches “wherein determining a coordinate location of a mobile device communicating over the communication network comprises receiving location information from the mobile device” (col. 4, lines 4-26, GPS within the device or keyboard entry).

Regarding **claim 27**, Cohen teaches everything claimed, as applied above (see claim 25). In addition, Cohen teaches “wherein receiving location information from the mobile device comprises receiving location information from the user of the mobile device” (col. 4, lines 4-26; keyboard entry is performed by the user).

Regarding **claim 28**, Cohen teaches everything claimed, as applied above (see claim 23). In addition, Cohen teaches “providing information over the communication network to the mobile device related to a location identified based on the location of the mobile device” (col. 4, lines 4-26, cellular transmission system may be used to determine geographic location).

Regarding **claim 33**, Cohen teaches everything claimed, as applied above (see claim 23). In addition, Cohen teaches “wherein building the dynamic grammar responsive to the determined coordinate location of the mobile device is also responsive to information provided by the user of the mobile device” (col. 4, lines 22-45; keyboard entry of location results in the retrieval of location-specific library).

Regarding **claim 34**, Cohen teaches a method for location-specific mobile speech recognition (abstract). Cohen’s teachings include the following:

- determining a location of a mobile device communicating over the communication network (col. 4, lines 5-26; determine the geographic location);
- building a dynamic grammar of information spatially related to the mobile device location based upon a distance around the determined location of the mobile device (col. 4, lines 24-56; utilize location specific grammars, representing street names and business within that geographic location);
- capturing a vocal expression of a speaker utilizing the mobile device (col. 4, lines 45-56; utterance is captured and recognized); and
- determining information related to the vocal expression based on comparing the grammar with the captured vocal expression (col. 4, lines 45-56; col. 5, lines 1-6).

Regarding **claim 35**, this claim has limitations similar to claim 24 and is rejected for the same reasons.

Art Unit: 2626

Regarding **claim 36**, this claim has limitations similar to claim 25 and is rejected for the same reasons.

Regarding **claim 38**, this claim has limitations similar to claim 27 and is rejected for the same reasons.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 26 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cohen in view of well known prior art (MPEP 2144.03).

Regarding **claim 26**, Cohen teaches everything claimed, as applied above (see claim 23). In addition, Cohen teaches the operation of the device over a cellular telephone network where the network can be used to determine location (col. 4, lines 14-17), but Cohen does not specifically teach “wherein determining a coordinate location of a mobile device communicating over the communication network is performed by a first server and building a dynamic grammar in response to the determined location of the mobile device is performed by a second server different from

Art Unit: 2626

the first server.” However, the examiner takes official notice of the fact that the use of multiple servers for the purpose of remote speech recognition was well known in the art.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Cohen such that multiple servers are used including one to build the dynamic grammar, because such a shared device allows for storage of large amounts of data that can be easily updated.

Regarding **claim 37**, this claim has limitations similar to claim 26 and is rejected for the same reasons.

3. Claims 29-32 and 39-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cohen in view of Julia et al. (US Patent 7,036,128), hereinafter referred to as Julia.

Regarding **claim 29**, Cohen teaches everything claimed, as applied above (see claim 28). But Cohen does not specifically teach “wherein the information provided over the communication network to the mobile device comprises direction information.” However, the examiner contends that this concept was well known in the art, as taught by Julia.

In the same field of endeavor, Julia discloses a mobile computing environment where information can be accessed from a variety of sources (abstract). Julia’s

Art Unit: 2626

teachings include access of direction information (Fig. 13, col. 32, lines 30-35, guides the car along the chosen route; col. 32, lines 10-15, using speech).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Cohen by specifically providing the features, as taught by Julia, because it is well known in the art at the time of invention for the purpose of more convenient access to information using speech recognition (Julia, col. 2, lines 28-33).

Regarding **claim 30**, Cohen teaches everything claimed, as applied above (see claim 28). But Cohen does not specifically teach "wherein the information provided over the communication network to the mobile device comprises map information." However, the examiner contends that this concept was well known in the art, as taught by Julia.

In the same field of endeavor, Julia discloses a mobile computing environment where information can be accessed from a variety of sources (abstract). Julia's teachings include access of direction information including the display of a map (Fig. 13, col. 32, lines 30-35, guides the car along the chosen route; col. 32, lines 10-15, using speech).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Cohen by specifically providing the features, as taught by Julia, because it is well known in the art at the time of invention for the purpose of more convenient access to information using speech recognition (Julia, col. 2, lines 28-33).

Regarding **claim 31**, Cohen teaches everything claimed, as applied above (see claim 28). But Cohen does not specifically teach “wherein the information provided over the communication network to the mobile device comprises address information.” However, the examiner contends that this concept was well known in the art, as taught by Julia.

In the same field of endeavor, Julia discloses a mobile computing environment where information can be accessed from a variety of sources (abstract). Julia’s teachings include access of direction information including address information (Fig. 13, col. 32, lines 10-67, location of nearest gas stations; col. 32, lines 10-15, using speech).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Cohen by specifically providing the features, as taught by Julia, because it is well known in the art at the time of invention for the purpose of more convenient access to information using speech recognition (Julia, col. 2, lines 28-33).

Regarding **claim 32**, Cohen teaches everything claimed, as applied above (see claim 28). But Cohen does not specifically teach “establishing a network connection from the mobile device to the location identified based on the location of the mobile device.” However, the examiner contends that this concept was well known in the art, as taught by Julia.

In the same field of endeavor, Julia discloses a mobile computing environment where information can be accessed from a variety of sources (abstract). Julia’s

Art Unit: 2626

teachings include the support from a communication center and access to technical information (Fig. 6, web agent; col. 9, lines 50-57, interaction with agents; col. 10, lines 5-17, access to services available over the Web; col. 32, lines 26-49, col. 32, line 65 through col. 33, line 10, e.g., documentation is available).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Cohen by specifically providing the features, as taught by Julia, because it is well known in the art at the time of invention for the purpose of more convenient access to information using speech recognition (Julia, col. 2, lines 28-33).

Regarding **claim 39**, Cohen teaches a method for location-specific mobile speech recognition (abstract). Cohen's teachings include the following:

- determining a location of a mobile device communicating over the communication network (col. 4, lines 5-26; determine the geographic location);
- building a dynamic grammar in response to the determined location of the mobile device (col. 4, lines 24-56; utilize location specific grammars);
- determining information related to the vocal expression based on comparing the grammar with the captured vocal expression (col. 4, lines 45-56; col. 5, lines 1-6).

But Cohen does not specifically teach the following:

- using the determined location of the mobile device to generate a user prompt;
- transmitting the user prompt to the mobile device;

Art Unit: 2626

- capturing a vocal expression of a speaker utilizing the mobile device in response to the user prompt.

However, the examiner contends that these concepts well known in the art, as taught by Julia.

In the same field of endeavor, Julia discloses a mobile computing environment where information can be accessed from a variety of sources (abstract). Julia's teachings include interacting with the navigation system which includes location specific prompts transmitted to the mobile device supported by speech recognition (col. 31, lines 10-46, col. 34, lines 11-25),

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Cohen by specifically providing the features, as taught by Julia, because it is well known in the art at the time of invention for the purpose of more convenient access to information while traveling using speech recognition (Julia, col. 2, lines 28-33).

Regarding **claim 40**, Cohen in view of Julia teaches everything claimed, as applied above (see claim 39). In addition, Julia teaches "wherein the prompt is a request for secondary information" (col. 31, lines 10-67, where queries are performed to access additional information).

Regarding **claim 41**, Cohen in view of Julia teaches everything claimed, as applied above (see claim 39). In addition, Cohen teaches "wherein determining a

Art Unit: 2626

location of a mobile device communicating over the communication network comprises receiving the location of the mobile device from the communication network. (col. 4, lines 4-26; signals from the cellular transmission network).

Regarding **claim 42**, Cohen in view of Julia teaches everything claimed, as applied above (see claim 39). In addition, Cohen teaches "wherein determining a location of a mobile device communicating over the communication network comprises receiving location information from the mobile device" (col. 4, lines 4-26, GPS within the device or keyboard entry).

Regarding **claim 43**, Cohen in view of Julia teaches everything claimed, as applied above (see claim 40). In addition, Julia teaches "wherein the secondary information is secondary address information" (col. 31, lines 35-46, gas stations in vicinity; lines 47-67, campus location data; open agent architecture can access additional information).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2626

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to V. Paul Harper whose telephone number is (571) 272-7605. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on (571) 272-7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2626

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
